Code for IBM i

- Improvements for supporting DBCS CCSIDs
- Compile DDS (lf, pf, dspf) from local git repositories
- Support for batch and SEP debugging
- Simplification of debug setup

Db2 for IBM i

- Integrated SQL syntax checking
- Hover support for quick references
- Signature support for procedures and functions
- Integration with AI platforms for natural language questions
- Updatable result sets
- Run All/Selected/From

worksofliam

@db2i can you please tell me the highest paid employee in each department? #result

@db2i can you please tell me the highest paid employee in each department? #result

▷ Run SQL statement

Db2 for i

✓ Running statement...

The result set contains information about employees, including their department, employee number, first name, last name, and salary. Here is a summary:

- **A00**: Christine Haas, Employee No. 000010, Salary: 52750
- **B01**: Dave Thompson, Employee No. 000020, Salary: 41250
- **C01**: Sally Kwan, Employee No. 000030, Salary: 38250
- **D11**: Hello Stern, Employee No. 000060, Salary: 32250
- **D21**: Evo Pulaski, Employee No. 000070, Salary: 1003234
- **E11**: John Geyer, Employee No. 000050, Salary: 40175
- **E21**: Theodore Spenser, Employee No. 000100, Salary: 26150

> SQL JOB MANAGER

Hover support and signature support

The screenshot shows a terminal window with the following content:

```
select * from table(qsys2.object_statist Untitled-1
1  select * from table(qsys2.object_statistics[])
object_statistics(
    object_schema => character varying(258),
    objtypelist => character varying(812),
    object_name => character varying(258)
): 70 columns
@param object_schema name, *ALL, *ALLAVL, *ALLSIMPLE, *ALLUSR, *ALLUSRAVL, *CURLIB, *LIBL, *USRLIBL - Default: none
@param objtypelist *ALL or list of system object types separated by blanks or commas - Default: none
@param object_name name, *ALLSIMPLE - Default: NULL
Search on IBM Documentation
```

The terminal window includes standard OS X window controls (red, yellow, green buttons) and a toolbar with a search bar, a user icon, and other icons. At the bottom, there are status indicators for jobs, language (MS SQL), date search, and a help icon.

Real time SQL syntax checker

The screenshot shows a code editor interface with a dark theme. At the top, there's a toolbar with icons for file operations, search, and settings. Below the toolbar is a tab bar with 'Untitled-1' selected. The main area contains the following SQL code:

```
1
2
3  create or replace procedure coolest_ever()
4  program type sub modifies sql data
5  set option usrprf = *user, dynusrprf = *user, commit = *none
6  begin
7  declare a integer
8  set a = 5;
9 end;
```

In the bottom right corner of the code editor, there's a small red vertical bar indicating a syntax error. Below the code editor is a 'PROBLEMS' panel. The 'PROBLEMS' tab is selected, showing one error: 'Untitled-1 1' with the message 'Keyword SET not expected. Valid tokens: NOT DEFAULT CONSTANT. - 42601 (SQL0199) [Ln 8, Col 3]'. The bottom of the screen features a status bar with various icons and text, including 'SNDBX3-iopen.iinthecloud.com', 'New job (1)', 'Ln 2, Col 1', 'Spaces: 2', 'LF', 'MS SQL', and 'Date Search'.

Run all/from/selected

The screenshot shows a SQL editor window with the following details:

- Title Bar:** Untitled-1
- Toolbar:** Search, User, Settings, Run/Stop, View, Help.
- Code Area:** Contains numbered SQL statements:

```
3 select * from employee;
4
5 select * from department;
6
7 stop;
8
9 select * from books;
10
11 select * from project;
```

The statement `select * from department;` is highlighted.
- Context Menu (Open with ⌘-Shift-R):** A dropdown menu is open at the end of the selected statement, listing options:
 - Run statement (⌘ R)
 - Run statement in new view (^ ⌘ R)
 - Run and explain statement (⇧ ⌘ R)
 - Explain without running (⌥ ⌘ R)
 - Run all statements** (highlighted in blue)
 - Run statements from cursor
 - Open as Notebook
- Bottom Navigation:** PROBLEMS, OUTPUT, TERMINAL, IBM I (selected), DEBUG CONSOLE, RUN AND DEBUG, PORTS, COMMENTS.
- RESULTS Table:** Displays data from the `department` table.

DEPTNO	DEPTNAME	MGRNO	ADMRDEPT	LOCATION
A00	SPIFFY COMPUTER SERVICE DIV.	000010	A00	null
B01	PLANNING	000020	A00	Hello world
C01	Info Centre	000030	A00	null
D01	Department of Tim	null	A00	null
D11	MANUFACTURING SYSTEMS	null	D01	null
D21	ADMINISTRATION SYSTEMS	null	D01	null
- Bottom Status Bar:** Shows 0 errors, 0 warnings, the connection URL (SNDBX3-iopen.iinthecloud.com), a New job (1) button, a search icon, Ln 5, Col 15, Spaces: 2, LF, MS SQL, Date Search, and a bell icon.

The word on debugging

Language support

- Ability to quickly format free-format RPGLE
- Go to implementation for export procedures from references
- Support for fixed-format RPGLE references
- Peek and go to definition for fixed- and mixed-format RPGLE

Go to Implementation & References

The screenshot displays two code editors side-by-side, illustrating the "Implementation & References" feature.

Left Editor (TEST.RPGL):

- File: TEST.RPGL
- Path: PBEHR > QRPGLESRC > TESTSRV_H.rpgleinc > whichLibrary
- Code:

```
1 **free
2
3 dcl-pr whichLibrary char(10) extproc(*dclcase);
4
5 ctl-opt option(*srcStmt : *noDebugIO : *noUnref);
6
7 /include TESTSRV_H
8
9 //=====
10 // Which Library?
11 //=====
12 dcl-proc whichLibrary export;
13   dcl-pi *n char(10);
14   end-pi;
15
16   return 'PATRICK';
17
18 end-proc whichLibrary;
19
20
```

Right Editor (employees.pgm.sqlrpgle):

- File: employees.pgm.sqlrpgle
- Path: qrpglesrc > employees.pgm.sqlrpgle
- Code:

```
8 // -----
9
10 //INCLUDE 'constants.rpgleinc' Path not valid. It must be relative to the project.
11
12 // -----
13
14 Dcl-F emps WORKSTN Sfile(SFLDta:Rrn) IndDS(WkStnInd) InfDS(fileinfo);
15
16 Dcl-S Exit Ind Inz(*Off);
17
18 Dcl-S Rrn      Zoned(4:0) Inz;
```

Bottom Status Bar:

- master*
- Ln 18, Col 9
- Spaces: 2
- UTF-8
- LF
- RPGLE

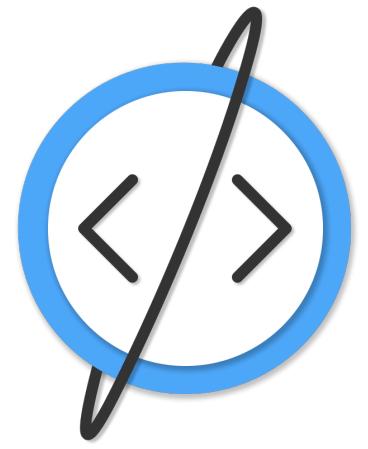

[Extension Development Host] ibmi-company_system

DEPTS.RPGLE dept.pgm.sqlrpgle X

qrpglesrc > dept.pgm.sqlrpgle > WkStnInd

Source Orbit

- Source based dependency management system
- Complete support for fixed-format, mixed-format and free-format RPGLE
- Support for git repositories and the QSYS file system
- Visual Studio Code extension release

Source Orbit

Object Browser

Shows all objects that would exist based on source code in the repository.

Object Dependencies

Nodes below the objects indicate that the parent depends on them.

Affected Objects

Source Orbit hooks right into git can show what objects would be affected (and might need to be rebuilt) based on the working and staged changes.

The screenshot shows the Source Orbit interface running on an IBM i system. The main window has several tabs open:

- EXPLORER**: Shows a tree view of objects under "BBS400".
- BBSLGIND.dspf M**: A data structure definition file.
- BBSADGCR.pgm.rpgle 1 X**: An RPGLE program source code editor.
- BBSADGCR.pgm.rpgle (Working)**: A preview or staging area for the RPGLE code.

The RPGLE editor contains the following code snippet:

```
H/TITLE Administration - General Configuration
H COPYRIGHT('C) 2020 David Asta under MIT License')
* SYSTEM      : V4R5
* PROGRAMMER  : David Asta
* DATE-WRITTEN: 12/NOV/2020

C          EXSR    CheckFkeys
*****
* Subroutine called automatically at startup
*****
C          *INZSR   BEGSR
```

The right side of the interface includes:

- OUTLINE**: A list of symbols and subroutines defined in the current source file.
- ACTIVE EDITOR: Affected Objects**: A list of objects that would be affected by changes made in the current editor.

Project Explorer

Integrated right into the IBM i Project Explorer without any additional setup required.

Diagnostic Messages

Source Orbit can make suggestions about source names, missing references, and more.

Affected Objects view

This view shows what objects would be affected based on the active editor. As you switch between sources, the view updates automatically.

King III Solutions

Growing Revenue
by 300% with
Visual Studio Code
and IBM i

VS Code is enabling K3S to write code more efficiently and faster with better performance as well.

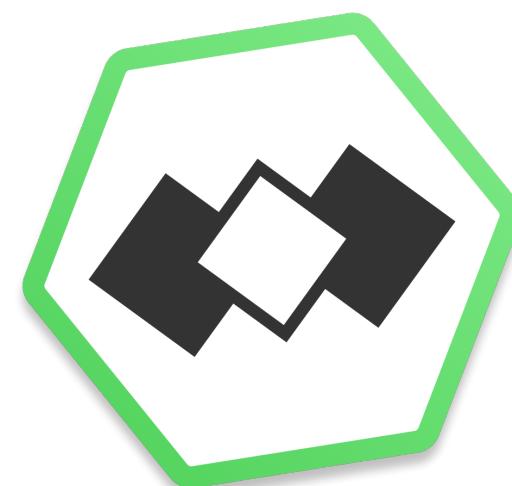

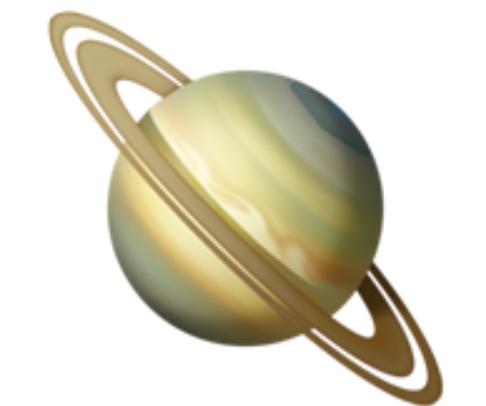

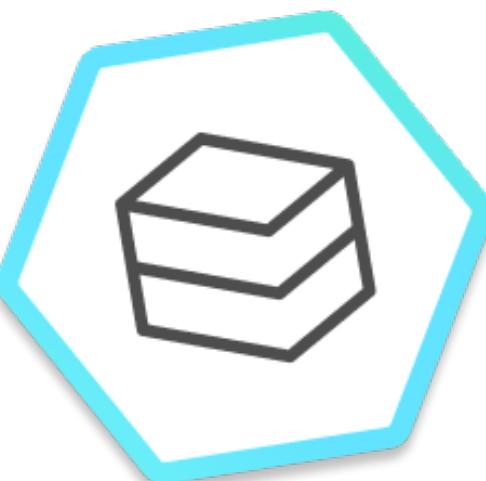

Their team can use an industry-standard application development solution while taking advantage of the mass amount of IBM i extensions that are available.

The development team at K3S comes from a wide variety of skills and backgrounds, but since they started to work with VS Code for IBM i, they've been able to all get on the same page by standardizing on one tool everyone can learn, increasing productivity immediately.

This has allowed the company to not only retain talent, but also attract new developers as well to the platform by implementing an industry-standard solution.

What's next

- Continued work on vscode-db2i
 - More improvements to Schema Browser
 - Visual Explain UI improvements
 - Loads more
- Build tools
 - To streamline development with git, we need build tools
 - Source Orbit to be expanded and easier to use
- Testing for IBM i
 - New extension in the works
 - User feedback already being collected
